Rotational [edit | edit source]. The rotation stress test is regarded as primarily stressing the contralateral alar ligament in accordance with the biomechanical description of Dvorak et al. Again, the test is described for both sitting and supine positions. The axis is stabilized around its laminae and spinous process using a lumbrical grip.

Once you have completed the programme, you will complete an End Point Assessment (EPA). This is a required part of all apprenticeship standards. Some EPAs will include a professional accreditation, which employers can require for some roles. Paid for by your employer. As an apprentice, you do not pay for the cost of your programme - this is covered by the Government,
