Inborn errors of human natural killer (NK) cells may affect the development of these cells, their function, or both. There are two broad categories of genetic defects of NK-cell development, depending on whether the deficiency is apparently specific to NK cells or clearly affects multiple hematopoietic lineages.

### **Inborn errors of metabolism - Wikipedia**

Inborn errors of metabolism (IEMs) are a large class of genetic disorders that result from defects in enzymes involved in energy production and metabolism of nutrients. For every metabolic pathway, there are defects that can occur and potentially result in an IEM.

### **Inborn Error of Metabolism - an overview | ScienceDirect ...**

Inborn errors of metabolism are rare genetic (inherited) disorders in which the body cannot properly turn food into energy. The disorders are usually caused by defects in specific proteins (enzymes) that help break down (metabolize) parts of food.
