Phototherapy And Photochemotherapy For Skin

An open left-right comparison study that compared the efficacy of moderate to potent topical corticosteroids with the efficacy of ultraviolet B (UVB) or psoralen plus ultraviolet A (PUVA) phototherapy in 20 patients with a clinical diagnosis of lichen amyloidosis found a trend towards greater reductions in patient-reported itch and skin roughness with phototherapy, but the difference was not ...

Phototherapy and Photochemotherapy (PUVA) for Skin Conditions

PUVA or photochemotherapy is a type of ultraviolet radiation treatment (phototherapy) used for severe skin diseases. PUVA is a combination treatment which consists of Psoralens (P) and then exposing the skin to UVA (long wave ultraviolet radiation). It has been available in its present form since 1976.

PUVA (photochemotherapy) | DermNet NZ

Phototherapy with narrow band ultraviolet B (UVB) has been shown to stop or slow the progression of active vitiligo. It might be more effective when used with corticosteroids or calcineurin inhibitors. You'll need therapy two to three times a week. It could take 1 to 3 months before you notice any change, and it could take 6 months or longer to get the full effect. Given the FDA warning ...

Vitiligo - Diagnosis and treatment - Mayo Clinic

Psoriasis is an inflammatory skin disease, involving the complex interaction network among which a variety of cells respond to light radiation differently. The outcome of phototherapy depends on a delicate balance between beneficial and detrimental effects of a specific laser. In comparison with other laser modalities, PUVA and UVB have the ...

PUVA steht als Abkürzung für Psoralen plus UV-A (auch Photochemotherapie).Mit einer Kombination von langwelligem UV-Licht und den als Naturstoff in ätherischen Ölen verschiedener Pflanzen vorkommenden Psoralen können deren photosensibilisierende Eigenschaften zu therapeutischen Zwecken genutzt werden. Für seine Arbeiten über die Phototherapie von Hautkrankheiten erhielt Niels Ryberg ...

PUVA - Wikipedia

It's important to note that some light therapy boxes are designed for insomnia and sleep disorders, while others are designed to treat skin disorders like psoriasis. Only light boxes designed to relieve sleep and mood symptoms filter out UV light, whereas ones for skin disorders don't — so ensure the light box you're considering emits most if not all UV light.
