Fairlie's answer was a double-ended steam locomotive, carrying all its fuel and water aboard the locomotive and with every axle driven. The double-ended part was accomplished by having one double-ended boiler on the locomotive, with one firebox in the centre and a smokebox at each end. The locomotive looked fairly conventional until the observer realised that the locomotive was two-faced, Janus ...

The hybrid diesel locomotive is an incredible display of power and ingenuity. It combines some great mechanical technology, including a huge, 12-cylinder, two-stroke diesel engine, with some heavy duty electric motors and generators, throwing in a little bit of computer technology for good measure. This 270,000-pound (122,470-kg) locomotive is designed to tow passenger-train cars at speeds of ...
