The solution (including the reactants and the products) and the calorimeter itself do not undergo a physical or chemical change, so we need to use the expression for specific heat capacity to relate their change in temperature to the amount of heat (q cal) that they have exchanged (Eqn. 3). In Eqn. 3, m is the mass (mass of the reactants + mass of water + mass of calorimeter). C is the ...

The aqueous solution of former has varying dissociation degrees with varying pH value. When it exhibits alkalinity, it exhibits anionic surfactants agent properties; upon exhibiting acidity, it exhibits properties of cation surfactant; upon being neutral, it exhibits non-ionic surfactant properties. The balance point of the cationic type and anionic type is called isoelectric point. The amino ...
